

MAGNE ST – Linear Tracking Airbearing Tonearm

The new Magne ST tonearm is a redesign of the classic Magne tonearm which is mounted as standard on the Magne turntable system. The Magne ST is a separate tonearm to be mounted on almost any turntable brands on the market. The redesign makes it more flexible than the classic Magne tonearm.

Magne ST fits perfectly to the latest Bergmann 4-arm turntable; model Galder.

In the design and construction of Magne ST, we keep to our idea of simplicity: As few parts and assemblings as possible to avoid resonances. The armtube is traditional for Bergmann tone arms: Well considered construction in few parts, made as a double tube construction with damping in between the tubes. All parts are assembled by 2-component epoxy – simple and vibration free design to secure as pure and coherent reproduction as possible.

The tonearm wire is, as usual in Bergmann tonearms, in one length from cartridge clips to the DIN connector. The DIN connector ensures user flexibility for connection of the preferred interconnect phono cable.

These minimalistic design features make an optimum signal transmission from the stylus tip to the phono stage, and lead to an unmatched transparent and spacious sound stage with the right timbre and musical information.

In addition, the set-up of this tonearm is entirely uncomplicated. The mounting distance from the spindle is like a traditional 9" radial tonearm, tightened by an 8mm metrical screw.

... the set-up of the tonearm is entirely uncomplicated

Counterweight is decoupled from the arm to avoid any resonances. The air supply is also important for the performance of the tonearms. The air pump must deliver an even, clean, and dry air flow.

The impulses from the pump are absorbed in an encapsulated reservoir. This results in an even airflow to the air bearing. The air supply is mounted with a filter, which prevents dust particles from entering the system. This filter is replaceable when necessary.

The pump is an oil free, long life unit, which requires minimum maintenance.

We at Bergmann Audio are looking forward to welcome you in our room in Atrium1, E109, to give you a demonstration.
